

Future Vehicles Summit – Fri 29 Jun

It is a disruptive time for the auto industry. Traditional vehicles are losing competitiveness to the new generation of vehicles with intelligent, immersive and digitally enhanced features. Car OEMs and disruptive market players must factor new technology trends into their innovation strategies or risk losing ground to those that do.

Apart from technology breakthroughs, in 2018 we will also see more national authorities launching policies, regulations and campaigns to accelerate the development of a new generation of personal and freight transportation. According to GSMA Intelligence's forecast, the connected vehicle market will be worth \$358bn by 2020.

The Future Vehicles Summit at MWC Shanghai will bring together the auto ecosystem to explore new technologies in the auto industries, and discuss the latest developments in some key areas such as car intelligence, autonomous driving, policies and regulation, new energy vehicles, security etc.

2017 speakers and delegates included:

5GAA, Allianz, Apple, BOE, CAICT, Continental, Daimler, Dakin, Dyson, Ford, Greatwall Motor Company, Jaguar Landrover, Kellogg, Neusoft, Nuance, Scania, Shell, Third Space Auto, Toshiba, Volkswagen
